E4: readout robustness under option coupling
Symmetric, 3 options
Asymmetric (3-4-5), 3 options
Symmetric, 4 options
Sensitivity to laziness and weight jitter
quantum, first crossing (v1)
quantum, random stopping
quantum, detection $p = 0.2$
classical, absorbing
P(uncoupled option)
coupling strength c
spread of P(uncoupled)
median
max
first crossing
random stopping
detection
classical
