E5: coherence versus intermediate measurement
Readout success p_T (grid, single)
measurement probability p
readout time T
Detection with absorbing measurement (grid, cluster)
found by T
deadline T
$p = 0$
$p = 0.1$
$p = 0.3$
$p = 1$ (classical)
Best measurement rate versus deadline
optimal $p^*(T)$
deadline T
grid_clustered
grid_single
toy_clustered
toy_single
Detection at a fixed deadline
found by $T = 40$
measurement probability p
grid_clustered
grid_single
toy_clustered
toy_single
